This slide should only give some idea of what this unit is about. No details and not supposed to be complete.

Boolean logic is probably the simplest possible (useful) logic.

Basic concepts:

- TRUE, FALSE
- AND, OR
- NOT

Assignment Project Exam Help

<https://powcoder.com>

Add WeChat powcoder

TRUE and FALSE are values for statements.

Note that not all statements qualify:

- Today, the temperature is over 15 degrees Celsius.
- Today, the weather is good.
- Haggis tastes great.

Assignment Project Exam Help

<https://powcoder.com>

Add WeChat powcoder

Assignment Project Exam Help

Usually, TRUE is represented by 1 and FALSE is represented by 0.

<https://powcoder.com>

Add WeChat powcoder

Do not confuse binary and Boolean:

| | Binary | Boolean |
|---|--------|---------|
| 0 | Zero | FALSE |
| 1 | One | TRUE |

Assignment Project Exam Help

<https://powcoder.com>

Add WeChat powcoder

A AND B can be represented as

$A \cap B$, $A \times B$, AB

Assignment Project Exam Help

A OR B can be represented as

$A \cup B$, $A+B$

<https://powcoder.com>

Add WeChat powcoder

NOT A can be represented as

\overline{A} , $\neg A$

Do not confuse binary and Boolean:

| | Binary | Boolean |
|-----|--------|------------|
| 0+0 | 0 | 0 OR 0 = 0 |
| 1+1 | 10 | 1 OR 1 = 1 |

Assignment Project Exam Help

<https://powcoder.com>

Add WeChat powcoder

Assignment Project Exam Help

<https://powcoder.com>

Statement A AND Statement B = TRUE only when both statements are TRUE.

Examples

- Donald Duck wears a blue sailor suit AND Donald Duck does not wear trousers.

Assignment Project Exam Help

<https://powcoder.com>

Is obviously TRUE

Add WeChat powcoder

- At the moment we have 15 degrees AND at the moment we have below 5 degrees.

Is obviously FALSE

Using 1 and 0, we can get a very compact representation as a truth table:

| A | B | AB |
|---|---|----|
| 0 | 0 | 0 |
| 0 | 1 | 0 |
| 1 | 0 | 0 |
| 1 | 1 | 1 |

Assignment Project Exam Help

<https://powcoder.com>

Add WeChat powcoder

Assignment Project Exam Help

OR

<https://powcoder.com>

A OR B means that either A or B or both are TRUE

Add WeChat powcoder

OR different from our usual understanding of or.

Example: On my toast I like bacon or jam.

In Boolean logic, this would mean I also enjoy having both, bacon and jam on my toast, which is actually not true.

Examples

- Today it will be warm OR it will be raining.

<https://powcoder.com>

Means that it can be warm and dry, cold and raining, or warm and raining.

Add WeChat powcoder

- Today it is more than 15 degrees OR below 16 degrees.

This is obviously always TRUE.

Truth table for OR

| A | B | A+B |
|---|---|-----|
| 0 | 0 | 0 |
| 0 | 1 | 1 |
| 1 | 0 | 1 |
| 1 | 1 | 1 |

Assignment Project Exam Help

<https://powcoder.com>

Add WeChat powcoder

Assignment Project Exam Help

Now, we only need to add negation and we can construct rather complex expressions.

<https://powcoder.com>

Add WeChat powcoder

NOT

Assignment Project Exam Help

If something is TRUE, then, the negation NOT TRUE is obviously FALSE.

<https://powcoder.com>

Add WeChat powcoder

| A | \bar{A} |
|---|-----------|
| 0 | 1 |
| 1 | 0 |

In electrical circuits, AND, OR, NOT and additional operators (e.g. XOR, NAND, NOR) are realised as so-called logic gates.

A gate performs one (or several) logical operations on some logical input (i.e. bits) and produces a single logical output.

Assignment Project Exam Help

<https://powcoder.com>

Add WeChat powcoder

Examples for gates

AND

OR

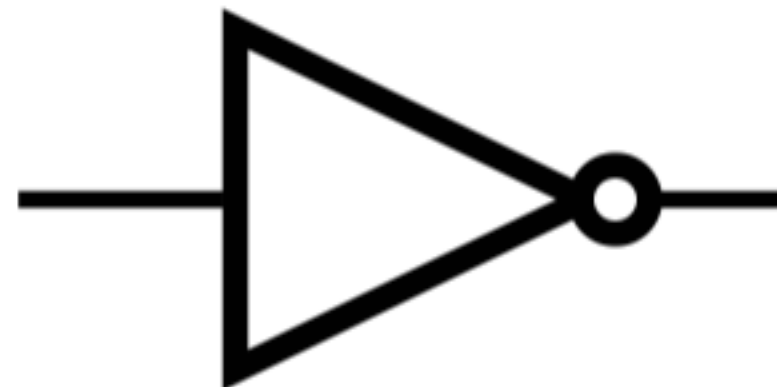

Assignment Project Exam Help

<https://powcoder.com>

Add WeChat powcoder

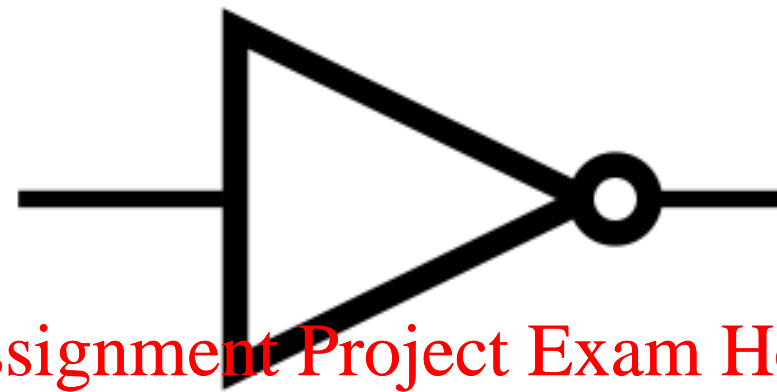

NOT

Logical circuits are not electrical circuits!

Low input can result in high output:

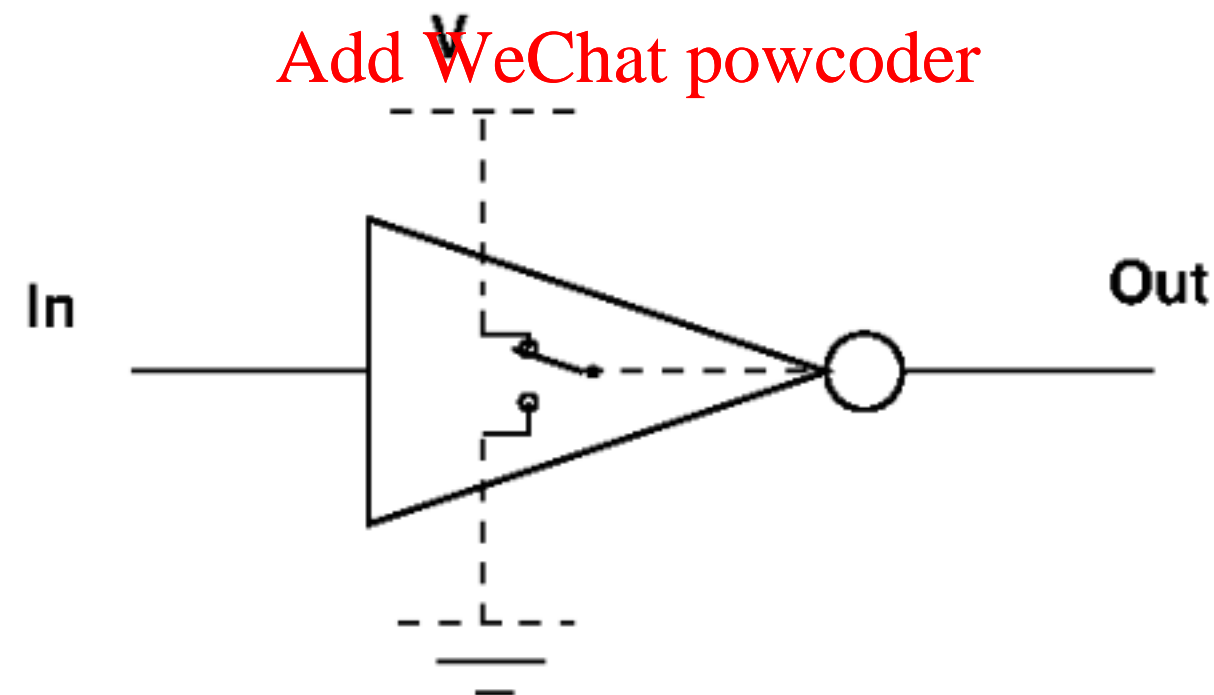

Assignment Project Exam Help

<https://powcoder.com>

The reason is, that power supply is not shown in the schematic symbols.

Add WeChat powcoder

Assignment Project Exam Help

- In the lab we will use a tool (Logisim) to simulate logical circuits.

<https://powcoder.com>

Add WeChat powcoder

So far, you have mainly seen Boolean logic
The term Boolean algebra implies that we might be able to do arithmetic on symbols.

Add WeChat powcoder

$$\overline{\overline{A}} = A$$

Optimization of Boolean functions

When realizing a function as circuit, one would like to minimize gates. Boolean functions can be minimized using the different laws.

However, determining the correct order of applying the laws is sometimes difficult.

In addition, one would like to minimize the use of different types of gates. Therefore, normalized forms can be useful.

One generic approach for minimizing (smaller) Boolean functions are Karnaugh maps or K-maps.

Assignment Project Exam Help

<https://powcoder.com>

Add WeChat powcoder

One of the most common forms of simplification in Boolean algebra is the following:

$$A\bar{B} + AB = A(\bar{B} + B) = A$$

Assignment Project Exam Help

<https://powcoder.com>

Add WeChat powcoder

One of the most common forms of simplification in Boolean algebra is the following:

Assignment Project Exam Help

$$A\bar{B} + AB = A(\bar{B} + B) = A$$

<https://powcoder.com>

The same with three variables:

Add WeChat powcoder

$$A\bar{B}C + ABC = AC$$

Both functions are independent from the value of B.

Assignment Project Exam Help

K-maps provide an easy graphical way to find minimal AND terms that are then combined with OR to get the complete function.

K-map for A AND B

Add WeChat powcoder

| | | B | |
|---|---|---|---|
| | | 0 | 1 |
| A | 0 | 0 | 0 |
| | 1 | 0 | 1 |

Let's look at a K-map with 3 variables:

$$\overline{B}A\overline{C} + AB\overline{C} + ABC + \overline{A}BC + \overline{A}\overline{B}\overline{C}$$

| | | BC | | | |
|---|---|----|----|----|----|
| | | 00 | 01 | 11 | 10 |
| A | 0 | 0 | 0 | 1 | 1 |
| | 1 | 1 | 0 | 1 | 1 |

- Find groups of 1s.
- The group of four 1s represents B.

Let's look at a K-map with 3 variables:

$$\overline{B}A\overline{C} + AB\overline{C} + ABC + \overline{A}BC + \overline{A}B\overline{C}$$

| | | BC | | | |
|---|---|----|----|----|----|
| | | 00 | 01 | 11 | 10 |
| A | 0 | 0 | 0 | 1 | 1 |
| | 1 | 1 | 0 | 1 | 1 |

- Find groups of 1s.
- The group of four 1s represents $B=1$.
- The wrapped group represents $A=1$ AND $C=0$.

Let's look at a K-map with 3 variables:

$$\overline{B}A\overline{C} + AB\overline{C} + ABC + \overline{A}BC + \overline{A}\overline{B}\overline{C}$$

| | | BC | | | |
|---|---|----|----|----|----|
| | | 00 | 01 | 11 | 10 |
| A | 0 | 0 | 0 | 1 | 1 |
| | 1 | 1 | 0 | 1 | 1 |

Assignment Project Exam Help

<https://powcoder.com>

Add WeChat powcoder

- Find groups of 1s.
- The group of four 1s represents $B=1$.
- The wrapped group represents $A=1$ AND $C=0$.

Simplified version: $B + A\overline{C}$
